Parameters

Filters

Characteristics	National
Total	118,290
Rooms	
1	504
2	1,170
3	9,209
4	19,777
5	26,265
6	25,330
7	16,942
8	10,460
9	4,728
10 or more	3,905
Persons per Room	
0.50 or less	85,888
0.51 to 1.00	29,874
1.01 to 1.50	2,152
1.51 or more	377

Census Data Given Specific Parameters

Challenges

01

The AHS Website was coded a long time ago. The platform that it was coded on is currently outdated and incompatible with the latest technologies.

02

As information was updated, repetition of previous code (formerly used to optimize code compilation, rolled out loop method), made functions difficult to test.

03

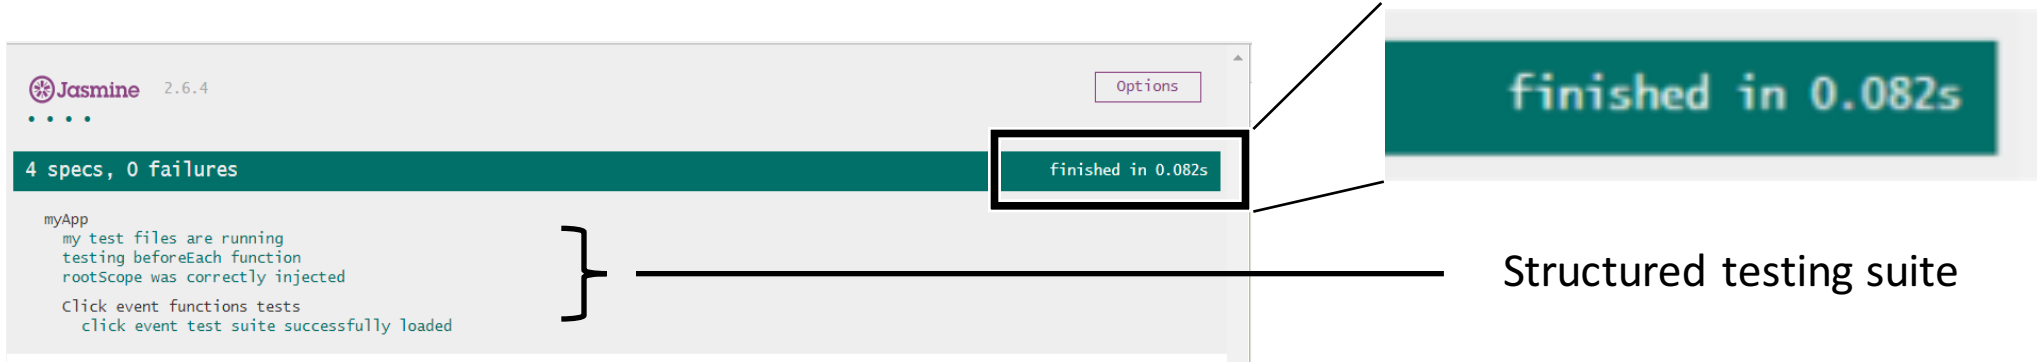

People tested the application by hand. Because of the sheer number of classes used to style the website, small discrepancies between web browsers and screen size cam to fruition.

Time Loss: Manual Testing

<u>Parameters</u>				<u>Filters</u>		Time to Physically Input Information:	
Areas	Years	Tables	Variables				
42	x 3	x 24	x 27	x 27	x 3	x	5 secs

= 9185 Hours = 230 Work Weeks

Solution Pt. 1: Automated Testing

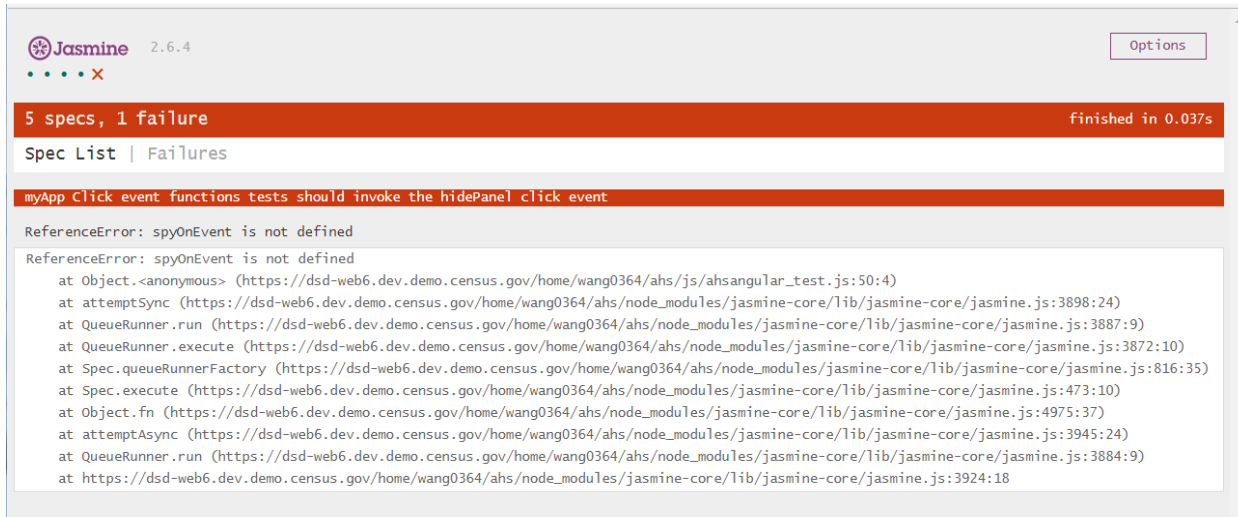

The image shows the Jasmine test runner interface. At the top left, it says "Jasmine 2.6.4". Below that, a green bar indicates "4 specs, 0 failures". To the right of this bar, a box says "finished in 0.082s". Further right, another box says "finished in 0.082s". Below the green bar, the test output is displayed: "myApp", "my test files are running", "testing beforeEach function", "rootScope was correctly injected", "Click event functions tests", and "click event test suite successfully loaded". A bracket on the right side of the output points to the text "Structured testing suite".

finished in 0.082s

finished in 0.082s

Structured testing suite

The image shows the Jasmine test runner interface. At the top left, it says "Jasmine 2.6.4". Below that, a red bar indicates "5 specs, 1 failure". To the right of this bar, a box says "finished in 0.037s". Below the red bar, the test output is displayed: "myApp Click event functions tests should invoke the hidePanel click event". Below this, the error message "ReferenceError: spyOnEvent is not defined" is shown. A bracket on the right side of the error message points to the text "Stack trace".

finished in 0.037s

Stack trace

Solution Pt. 2: Better Coding Practices

Before

After

```
301
302
303 //all widths must match what's in the style.css and style-ie.css files.
304
305 $(".resultsContainer").animate({
306     marginLeft : "1px",
307     width : "749px"
308 }, 200);
309
310 $("#results").animate({
311     width : "749px"
312 }, 200);
313
314 $(".container").animate({
315     width : "320px",
316     opacity : 1
317 }, 400);
318
319 $("#showPanel").animate({
320     width : "0px",
321     opacity : 0
322 }, 200).hide("slow");
323
324 $(".button").animate({
325     opacity : 1
326 }, 1000);
327
328 $(".reset").animate({
329     opacity : 1
330 }, 1000);
331
332 });
333
334 //jquery('table').Scrollable(100, 800);
335
```

Repetition

```
1
2 angular.module('raApp').service('homeService', homeService);
3
4 function homeService($http) {
5     function getData() {
6         return $http.get({list:"resourceInformation",
7             fields:["ID", "resourceName", "resourceType", "daysBetweenAudits"]})
8             .then(function (response) {
9                 return response;
10            });
11     }
12     return {
13         getData: getData
14     }
15 }
```

Modularization

Audit History

Order By:

Due Date

Show: [All](#) [Incomplete](#) [Completed](#)

Group Name	Type of Group	Due Date	Last Audit	Status
(Name of group being audited)	(LDAP, <u>Sharepoint</u> , etc.)	(Date the audit is due)	(Last date reviewed)	(Complete or incomplete)

Problem

1

The old personnel auditing system used outdated technology that will be difficult and expensive to maintain as the Census Bureau transitions to newer technologies.

2

For applications coded in Angular, a newer version has begun to replace Angular 1, whose functions are no longer supported by up-to-date testing platforms such as Jasmine.

Benefits of the Newer Angular

01

It is compatible with node.js (used in many newer applications) and PHP (used in many older applications).

02

It has an faster code optimization routine.

03

It comes with built-in testing frameworks such as Jasmine and Karma

04

It comes with its own set of methods and style classes that are constant in functionality between different operating systems.

| To The Future

Old practices were tailored to the necessity of the time. Though they worked well many years ago when technology was different, they are not always the most efficient for the modern era.

As new technologies are created, software engineers should be open and willing to use them.
